RentFlow – UI polish round 2

Before / after · dark and light theme · desktop 1280px and mobile 390px · branch ui/review · 2026-10-16

What changed

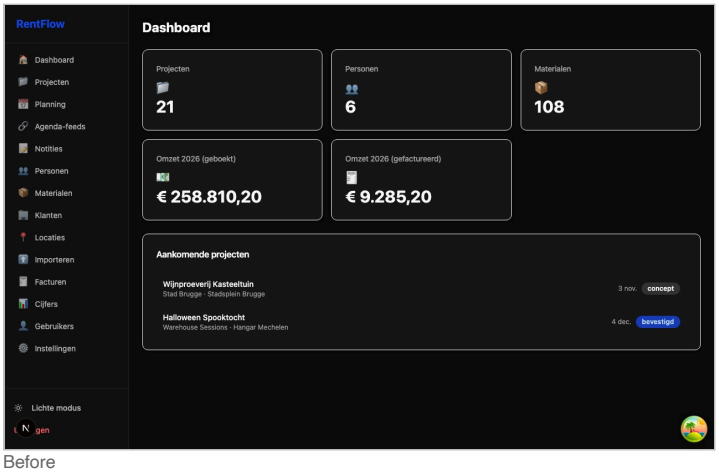

Problem found	Change
Harsh full-contrast borders everywhere (white in dark, black in light) – Tailwind v4 defaults to currentColor and no base border colour was set	Base layer sets `border-color: var(--border)`; cards, tables, inputs, dividers are now subtle in both themes
No "where am I" in the navigation; 14 flat items	Active page highlighted; items grouped Werk / Gegevens / Financieel / Beheer; one shared nav component for sidebar and mobile menu
Emoji as icons (nav, buttons, row actions) – inconsistent per OS, icon-only buttons without labels	lucide icons for nav, dashboard, export/import buttons and edit/delete actions; icon-only buttons got `aria-label`s
Dashboard: 5 tiles in an uneven 3+2 grid, emoji in tiles	Counts row (3) and revenue row (2), icon top-right, tabular numbers
Project detail header: back link + 4 buttons on two rows	One row: Terug left, Bewerken + "Afdrukken ▾" menu (Pakbon / Callsheet / Kostenoverzicht) right
Light theme: destructive badges had black text on red (missing `--destructive-foreground` token)	Token added for both themes (white on red in light, near-black on coral in dark)
Page titles sat at different heights	`PageHeader` has a fixed min-height

Checks

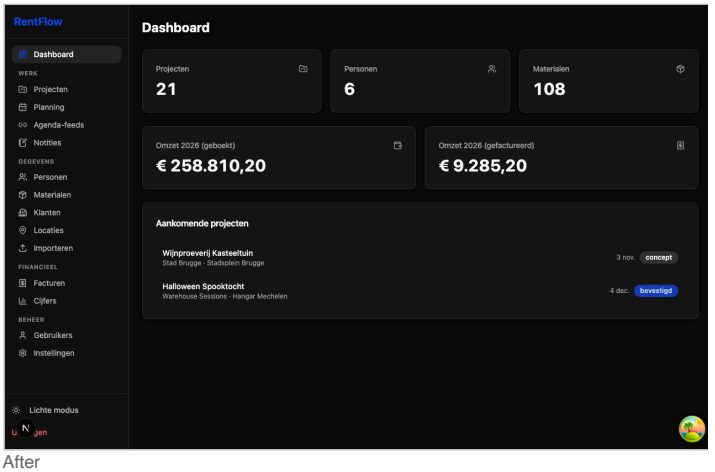

tsc clean · eslint clean · vitest 972 passed · responsive audit (21 routes × 7 widths): 0 pages scroll sideways, 0 elements off-screen, no sidebar scrollbar down to 768px screen height (caught and fixed one regression from the new grouped nav).
