RentFlow – responsive UI audit

Before / after report · 2026-10-16 · 21 routes × 7 widths · seeded local DB

Scope & method

Playwright/Chromium measured every scrollable element and every element past the right edge of `<main>`. `main` is the page scroll container by design, so vertical scroll there is ignored; counted are (1) pages where `main` scrolls **sideways** and (2) **nested** vertical scrollers.

Results by width (pages affected, of 21)

Width	Sideways, before	after	Nested v-scroll, before	after
360px	10	**0**	2	**1**
390px	9	**0**	2	**1**
768px	2	**0**	2	**1**
1024px	1	**0**	2	**2**
1280px	0	**0**	2	**2**
1440px	0	**0**	2	**2**
1920px	0	**0**	2	**2**

Pages that slid sideways (widths)

Route	Before	After
/projects	360, 390	**clean**
/projects/41/kosten	360	**clean**
/people	360, 390	**clean**
/materials	360, 390, 768	**clean**
/materials/labels	360, 390, 768, 1024	**clean**
/clients	360, 390	**clean**
/locations	360, 390	**clean**
/facturen	360, 390	**clean**
/agenda-feeds	360, 390	**clean**
/settings	360, 390	**clean**

Findings

- **Header action rows don't wrap** – /materials, /people, /clients, /locations, /facturen, /projects.
- **Cards that don't shrink** – client/location rows (`flex items-start` without `min-w-0`).
- **Sidebar shown from 768px** – leaves 544px of content on tablets portrait.
- **Planning grids** – 7 columns squashed to ~64px, chips unreadable ≤768.
- **Nested scrollbars** – materials list (`max-h-[60vh]`) and label preview grid.
- **Label sheet** fixed ~800px wide inside `main`; cost table unwrapped on /kosten.

Fixes applied

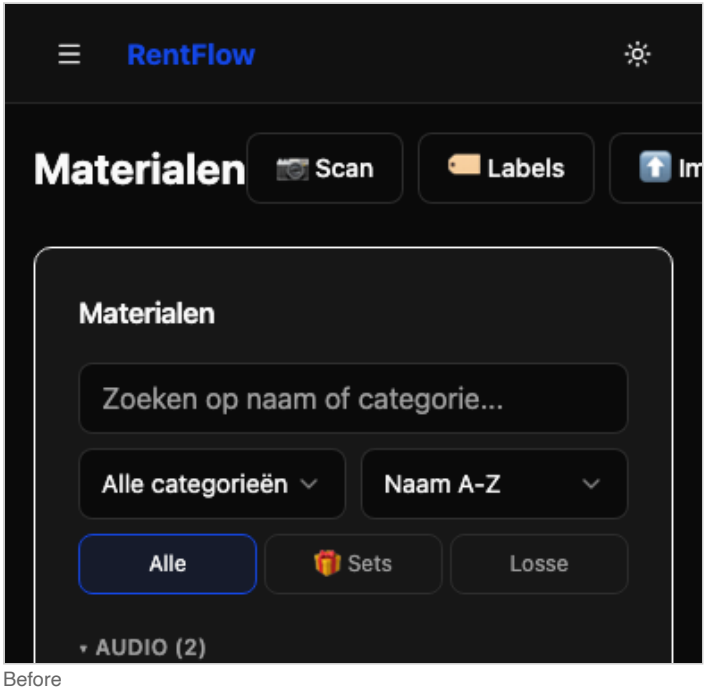

Problem	Fix	Files
Header action rows ran off screen (6 pages + labels)	New shared `PageHeader`: `flex-wrap` title + actions	components/page-header.tsx, materials, people, clients, locations, projects, facturen, labels pages
Sidebar shown from 768px (544px	Sidebar/hamburger switch moved `md` → `lg`	sidebar.tsx, mobile-sidebar.tsx

content on tablets)		
Client / location cards pushed buttons off-screen	Stack on mobile (`flex-col sm:flex-row`), `min-w-0` on text, wrapping actions	client-list.tsx, locations/page.tsx
"Intrekken" past edge (agenda-feeds, settings)	Action group `flex-wrap`	calendar-feed-row.tsx
Cost table overflowed at 360	Wrapped in `overflow-x-auto`	kosten-period-table.tsx
Label sheet (fixed A4 width) slid the whole page	Sheet wrapped in its own scroller (`print:overflow-visible`)	materials/labels/page.tsx
Planning week: 7 squashed columns	1 col mobile → 4 cols md → 7 cols xl	planning-week-grid.tsx
Materials list: 60vh box inside scrolling page (all widths)	No cap below lg; sticky pane bounded to viewport at lg+ (deliberate master-detail scroller)	materials-tree-pane.tsx
Stat card labels clipped	4-up grid only from `md`	project-overview-tab.tsx

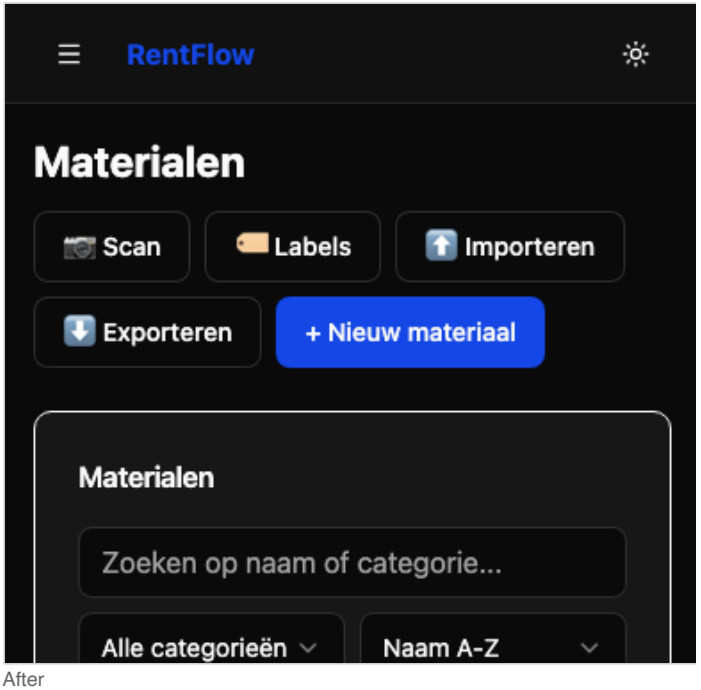

Verified: tsc clean, eslint clean, vitest 972 passed. **Remaining by design:** table inner h-scroll (facturen, cijfers, users, settings), label-picker list (50vh), materials list at lg+, project tab strip.
